Professional Summary

B.Tech CS (AI & ML) graduate (2026), CGPA 8.23, with hands-on experience building a live, production multi-tenant HRMS/ERP SaaS used by 130+ employees. Delivered core Django/React modules including leave management, org chart, notification systems, and an AI-driven theme engine for per-tenant UI customization. Additional experience with RAG-based AI planning and ML-based predictive modeling.

Professional Experience

Python Full Stack Intern – Z.APPS Feb 2026 – Aug 2026, Sricity

- Shipped a live, production multi-tenant HRMS/ERP SaaS used by 130+ employees; built the leave management microservice end-to-end with an immutable ledger balance pattern and automated email notifications.
- Architected a five-layer multi-tenancy system — TenantScopedModel, TenantManager, JWT-based, HRRouter multi-DB routing, CompanyMiddleware and static audit tooling.
- Built an AI-powered theme engine that extracts color palettes and style cues from uploaded images and applies them across the portal UI, enabling per-tenant, user-driven visual customization.
- Built the org chart module using efficient data structures and algorithms (O(n) tree builder with cycle detection), demonstrating strong problem-solving skills to handle multi-root hierarchies and complex data relationships.
- Resolved critical backend performance issues, including an N+1 query bug via bulk role-map refactor, applying analytical and logical thinking to optimize database efficiency and system stability.
- Developed an AI chatbot on the HRMS platform using Groq LLM with RBAC-scoped, audit-logged query access; implemented dual auth paths (JWT for HR/admin, employee-ID based for staff).
- Authored technical documentation for API endpoints and system architecture to ensure maintainability and facilitate knowledge transfer within the development team.

Education

Siddharth Institute of Engineering and Technology – Puttur 2026
B.Tech in Computer Science and Engineering (AI & ML) — CGPA: 8.23/10

Sri Chaitanya Junior College – Tirupati 2022
Intermediate (MPC) — Marks: 787/1000

Certifications & Achievements

- The Joy of Computing Using Python – NPTEL
- Python Full Stack Development Certification

Technical Skills

Languages: Python, SQL, JavaScript

Frontend: React.js, HTML5, CSS3, Bootstrap, Recharts

Backend: Django, Django REST Framework, REST APIs, Microservices, JWT Authentication, RBAC

Databases: MySQL, SQLite

Tools: Git, GitHub, Postman, VS Code

AI/ML: RAG (Retrieval-Augmented Generation), LLM Integration (Groq), AI-Based Theme/Style Extraction, Scikit-learn, Pandas, NumPy

Concepts: Multi-Tenancy, Role-Based Access Control, Microservice Architecture, ERP/HRMS Systems, Audit Logging, API Design

Projects

Enterprise HRMS ERP System (Live – 130+ Users)

- Production multi-tenant HRMS covering leave management, attendance, employee management, org chart, and notification engine — actively used by company staff and HR administrators.
- Built an AI-driven theme engine that extracts a color palette from an uploaded image and applies it as a live, user-customizable theme across the portal.

AI Planner using RAG (Retrieval-Augmented Generation)

- Built a context-aware planning assistant using RAG architecture: document retrieval, vector search for relevant context, and LLM-generated personalized suggestions.

Heart Disease Prediction – Dual Stacked Ensemble

- Designed a dual stacked ensemble combining multiple base classifiers to outperform single-model baselines; engineered a robust data pipeline for real-time patient predictions and preprocessing.
