SUMMARY

Recent CS (AI & ML) graduate who has shipped and owned a live product end-to-end — not just written code. Built and drove a multi-tenant HRMS/ERP SaaS from 0→1 to 130+ daily users as the sole full-stack owner: scoping features from vague requirements, prioritizing what to build, and iterating based on real user feedback. Comfortable with SQL and data-driven decisions, builds fast with AI tools (LLM integration, RAG, AI-assisted "vibe coding"), and pairs strong technical fluency with product judgment and high ownership.

RELEVANT STRENGTHS (MAPPED TO FOUNDING PM ROLE)

- **0→1 Product Ownership:** Shipped a real product to 130+ users end-to-end — requirements, UX decisions, build, and iteration — with full ownership of quality and outcomes, working directly with a small team.
- **Data & SQL:** Wrote SQL-backed reporting logic and built interactive dashboards (Recharts/React) to surface leave balances, org data, and system health — comfortable turning raw data into decisions.
- **AI-Native Builder:** Actively builds with AI day-to-day — integrated Groq LLM for an in-product chatbot, built a RAG-based planning assistant, and used AI-assisted coding workflows to move fast without sacrificing quality.
- **Vague → Shipped:** Took ambiguous asks ("personalize the portal per company") and turned them into a shipped AI-driven theme engine — the kind of vague-problem-to-shipped-feature thinking the role calls for.
- **Quality Bar:** Diagnosed and fixed a production N+1 performance bug and redesigned the multi-tenancy architecture — sharp attention to detail and bias for fixing root causes, not just symptoms.

EXPERIENCE

Python Full Stack Intern — Z.APPS *Feb 2026 – Aug 2026*
Sricity, India

- Owned and shipped a live, production multi-tenant HRMS/ERP SaaS to 130+ employees, including the leave management flow end-to-end with an auditable ledger balance pattern and automated notifications — driving adoption and daily usage.
- Designed the org chart module (O(n) tree builder with cycle detection) to handle multi-root hierarchies, translating a messy real-world data problem into a clean, reliable feature.
- Built an AI-powered theme engine that extracts color palettes from an uploaded image and applies them live across the UI — a self-directed, AI-native feature built from an open-ended "make it feel personal" ask.
- Shipped an AI chatbot (Groq LLM) with RBAC-scoped, audit-logged access and dual auth paths for HR vs. staff — balancing product usefulness with access-control rigor.
- Found and fixed a critical N+1 query bug via a bulk role-map refactor after noticing a performance regression — proactive ownership rather than waiting to be told.
- Wrote technical documentation for APIs and architecture so the rest of the team could build on top of the system — valuing clear, structured communication.

PROJECTS

AI Planner (RAG-based)

- Built a context-aware planning assistant using retrieval-augmented generation: document retrieval, vector search, and LLM-generated personalized suggestions — self-initiated proof of AI-native building.

Heart Disease Prediction — Dual Stacked Ensemble

- Designed a dual stacked ensemble across multiple base classifiers and built a data pipeline for real-time predictions — hands-on with data analysis and model evaluation.

TECHNICAL & PRODUCT TOOLKIT

Languages & Data: Python, SQL, JavaScript

Product Building: React.js, Django, REST APIs, end-to-end feature ownership, dashboards (Recharts)

AI / Vibe Coding: LLM integration (Groq), RAG, AI-assisted coding workflows, AI-based feature design

Data & Analytics: SQL querying, MySQL, Pandas, NumPy, Scikit-learn, dashboarding

Tools: Git, GitHub, Postman, VS Code

EDUCATION

B.Tech, Computer Science (AI & ML) — Siddharth Institute of Engineering and Technology, Puttur *2026*
CGPA: 8.23/10

Intermediate (MPC) — Sri Chaitanya Junior College, Tirupati *2022*
Marks: 787/1000

CERTIFICATIONS

- The Joy of Computing Using Python — NPTEL
- Python Full Stack Development Certification
